It is derived from lymphoid B cells, cell line Raji, clone no. 13. Its position in the genome is chromosome/segment 3. It was published by Freeman, F.J. et al., J. of Immunology, 143: 8: 2714-2722, 15th October 1989. It can be found in Genbank at Accession no. M27533. The encoded protein, R67989, binds both human CTLA4 and human CD28. It is related to human hB7-2 (see Q81351) and murine hB7 (see Q81372).

                                                                                  The modified tumour cells can be used for inducing an anti-tumour T-lymphocyte response in a subject and are effective against both modified and unmodified tumour cells. The modified tumour cells can also be administered to prevent or inhibit metastatic spread of a tumour or to prevent or inhibit recurrence of a tumour following therapeutic
                                                                                                                                                                                                              which allows the induction of an anti-tumour response by T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Domain
                                                                                                                                        This sequence represents the amino acid sequence of a human B7 protein. The coding sequence can be used to transfect mammalian tumour (sarcoma) cell so that the B7 protein is expressed by the tumour cell and has the ability to co-stimulate T cells and bind CD28 or CTLA4 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QY
                                                         This sequence is the human B7-2 antigen, which can be used in the method of the invention. The method is for transfecting an isolated mammalian tumour cell with an exogenous nucleic acid molecule encoding a mammalian B7-2 molecule, where the B7-2 molecule is expressed in the tumour cell is capable of costimulating a T cell and is capable of binding a CD28 or CTLA4 ligand. The method is useful for treating tumours
                                                                                                                                                                                                                      Tumour cell transfected to express B7-2 molecule therapy by stimulating T-cell response

The invention relates to an isolated nucleic acid molecule encoding a fusion protein comprising a first nucleotide sequence encoding a first competitive, and a second nucleotide sequence encoding a second peptide. The first nucleotide sequence hybridizes in 6 x sodium chloride/sodium controlled sequence hybridizes in 6 x sodium chloride/sodium controlled sequence hybridizes in 6 x sodium chloride/sodium controlled for controlled sequence which encodes a human or murine controlled for the ability to bind CD28 or CTLA4. The first peptide has an amino acid controlled that is identical or at least 50% identical with the controlled is sequence that is identical or at least 50% identical with the controlled is septide is septially an immunoglobulin constant region. This sequence controlled is esquence in the human B7-2 peptide (AAB37085). The second comparison with the B7-2 sequence. The human B7-2 protein is an example of a first peptide sequence of the invention. The nucleic acid molecules are useful in various expression vectors to direct synthesis of the corresponding proteins or peptides in a variety of hosts, particularly calds are also useful for enhancing the immunogenicity of a mammalian cell, e.g. tumour cell (sarcoma) or an antigen presenting cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

The fusion proteins or peptides are useful for enhancing or suppressing T cell-mediated immune responses, e.g. in situations of tissue, skin or organ transplantation, or in graft-versus-host disease. The proteins are also useful for enhancing the efficacy of vaccination against a variety of pathogens, and may also be used to upregulate an immune response against a particular pathogen during an infection or against a tumour in a tumour-bearing host.

The cDNA encoding this sequence was isolated from a Burkitt lymphoma cell line cDNA library. Selection of cDNA clones was based on expression of B7, as detected by the anti-B7 monoclonal antibody. The human B7 cDNA was used in hybridisation analysis to isolate the murine B7 cDNA (see AAA61329). The B7 nucleic acid sequences may be used to generate transgenic, knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The expressed B7 protein is useful for enhancing or blocking activated T cell mediated immune responses and immune function. Modification of B7 expression is useful in the treatment of autoimmune diseases (e.g. rheumatoid arthritis or multiple sclerosis), herpes simplex, influenza, the common cold and HIV. It is also useful in tissue and organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human B7.1 co-stimulatory molecule
                                                                                                                                                                                                                                                                                                                                                                                                    These methods can be used for regulating cell growth and division to control disease processes by manipulating mitochondrial metabolism and the expression of cell surface immune proteins. They can be used for treating diseases associated with excessive cellular division, aberrant differentiation, and premature cellular death, e.g. cancers, autoimmune diseases, neurodegenerative disorders etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is human B7.1 co-stimulatory molecule. This is a glycoprotein on the surface of antigen presenting cells. This is involved in stimulation of an immune response by its ability to interact with various immune cell surface receptors. The regulation of cell surface expression of MRC classII and co-stimulatory molecule B7 can be manipulated by regulating the intracellular dissipation of proton motor force which can be assessed in terms of mitochondrial membrane potential.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-OCT-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the human B7.1 protein sequence.

CC The invention relates to an isolated nucleic acid construct (I)

CC comprising a region encoding an interleakin-12 (IL-12) fusion protein

CC (comprising an IL-12 p35 subunit, an IL-12 p40 subunit and a linker

CC (comprising an IL-12 p35 subunit, an IL-12 p40 subunit and a linker

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a region encoding a B7 protein. (I)

CC (comprising the subunits) and a second either the produced either the functional polypeptide to supplement the patients own.

CC (comprising the subunits) and proteins produced in this way may be used to treat any disease which responds to IL-12 such as tumours

CC (comprising the subunits) and melanomas) and in particular, tumours of the blood cervical tumours and melanomas) and in particular, tumours of the blood such as lambagamia alternativaly, the nolyposities may be used to the sead as
                                                                                                                                                                                                                                                                                                                                                          and the antibodies may be used to detect the presence of IL-12 polypeptides in samples. They may be used diagnostically to quantitate the expression of the polypeptide by patients and hence which subjects
                                                                                                                                                                                                                                                                                                                                                                                                                    such as leukaemia. Alternatively, the polypeptides may be used as antigens in the production of antibodies to IL-12 and to assay for agonists and antagonists of its activity. The antibodies and antagonists may be used to inhibit the activity of IL-12. (I) may also be used diagnostically as a probe which hybridizes to sequences encoding IL-12
                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example; Fig 10; 73pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAU05121
                                                                                                  composition comprises an allogeneic tumour cell selected from $M620 cell, COLO 205 cell and $M403 cell, and a physiological carrier. The allogeneic cell stimulates an immune response to an autologous tumour cell in the patient. The composition is useful for stimulating an immune response in a patient having an adenocarcinoma. e.g. colon, breast, lung or prostate source of antigen that can be administered to a variety of patients, in contrast to using autologous tumour cells, which must be isolated from each individual patient. The allogeneic cells, which must be isolated from each individual patient. The allogeneic cells are suitable as a cancer vaccine and can stimulate an immune response against suitable as a cancer
                                            vaccine and can stimulate an immune response against autologous tumour cells of a cancer patient. The present sequence represents the amino acid sequence of colorectal tumour antigen CD80 used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising an allogeneic tumour cell, useful for
stimulating an immune response in a patient having an adenocarcinoma,
especially useful for treating colorectal, breast, lung or prostate
                                                                                                                                                                                                                                                                                            The invention relates to a composition for stimulating an immune response
                                                                                                                                                                                                                                                                              in a patient having an adenocarcinoma or colorectal cancer.
                                                                                                                                                                                                                                                                                                                                        Example 2; Page 130-131; 131pp; English.

                                                                                                                                                                                                                                                                                                                                                               CC molecule, by using an agent which induces or increases expression
CC of the T cell costimulatory molecule on the tumour cell surface, or
CC by coupling the T cell costimulatory molecule to the tumour cell
CC surface. Tumour cells further modified to express major
CC or in which expression of an MFC associated protein, the invariant
CC cor in which expression of an MFC associated protein, the invariant
CC chain, is inhibited are also disclosed. The modified tumour cells
CC are used to treat a patient with a tumour, preventing or inhibiting
CC metastatic spread or tumour recurrence. The tumour may be a
CC metastatic spread or tumour recurrence. The tumour may be a
CC metastatic spread or tumour by modification of tumour, and a
CC metastating a tumour by modification of tumour cells in vivo
CC are also disclosed. The treatment methods increase the immune period for the tumour cell in vivo. The antitumour T cell mediated immune
CC unmodified tumour cells from which the modified tumour cells and the
CC modified tumour cells is not dependent upon expression of a
CC costimulatory molecule on the tumour cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell costimulatory molecule that binds to CD28 and CTLA4. Tumour cells modified to express a T cell costimulatory molecule, especially B7, are disclosed. The tumour cells are modified by transfection with a nucleic acid enoding the T cell costimulatory
                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifying tumor cell for treating tumors, reducing metastatic spread, inhibiting recurrence of tumor and increasing immunogenicity, involves transfecting tumor cells with a nucleic acid encoding B7 molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of human lymphocyte antigen B7, a T cell costimulatory molecule that binds to CD28 and CTLA4. The antibody is an anti-CEA (carcinoembryonic antipen) antibody (preferably 806.077 Ab). Host cells or transgenic organisms transformed with DNA encoding the antibody, are used to make the antibody or conjugate. The conjugate is used in a medicament suitable for intravenous administration. The conjugate can be used for cancer therapy, selectively killing tumour cells. The antibody can be used for in vivo or in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chimeric -

                                                                                            Qy
                                                                                                                                                                                                                                    This 29 kDa soluble fusion protein, termed hB7.1glu-glu, is composed of human co-stimulatory molecule B7.1 extracellular domain fused C-terminally to a synthetic Glu-glu epitope (see AAW90197). It was produced from total RNA of Epstein-Barr virus-transformed human spleen cells by RT-PCR using primers MR67 and MR145 (see AAW01601). The fusion protein has been produced in Sf9 Spodoptera can be a specific and specific and specific and specific and specific and the furwariant antibodies and small antigen binding peptides which can cross-link, or cross-react with, B7.1 and B7.2 expressed on artigen-specific collection. Methods to produce such antigen-specific collection. Methods to produce such can collection and specific conscious are provided. The molecules are used to treat or prevent diseases of the immune system, in particular graft rejection, graft versus host disease, allergy and autoimmune diseases (claimed).

                                                                                                                                                                      Comprising the amino acid sequence of B7-1.574.1, a fusion protein comprising the extracellular domain (amino acids 1-215) of human co-stimulatory molecule B7-1 joined via a flexible peptide linker to an scFv (see AAM86002) derived from murine 574 monoclonal antibody. B7-1.574.1 cDNA (see AAW80292) can be inserted into vector pCI to allow expression of the fusion protein in mammalian cells. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI cand/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage. B7-1 is expected to bind specifically to CD28 and CTLA-4 present on human T-cells.

                                            The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treatment of treatment of your diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders autoimmune diseases, cancers, central nervous system disorders of including Parkinson's disease, periodontal diseases, cardiopulmonary confections, diabetes, Helicobacter-related diseases, and other immune constructers. The present sequence represents a B7-1.574.1 fusion protein. This comprises the N-terminus of the 574 ScFv is fused after amino acid
                                                                                                                                                                                                                                                                                                                                       Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-NOV-1999; 99WO-GB03859.
